

Description

Rectangular pant piece (RPP) is used for creation of bifurcation in the ventilation system.

For example, in the need of separation of the main duct to two smaller channels for better supply or evacuation of the air.

This piece is made of galvanized metal sheet with built in flanges P20/P30 and metal corner for the appropriate attachment of pieces and necessary level of tightness of the ventilation system.

Order example:

RPP - AAA*BBB - CCC - DDD - eee - L - H

type	_____
